

## VAPT 3<sup>rd</sup> Report

# 1 – Advanced Exploitation and Web Application Testing Lab

Target: <http://192.168.0.125/dvwa>

Tools: Nmap, Owasp ZAP, Nikto

XSS – generating remote alert

XSS - inserting script to retrieve cookies

Vulnerability	Severity	URL
Remote Code Execution - CVE2012-1823	High	<a href="http://192.168.0.125/dvwa/?d+allow_url_include%3d1+d+auto_prepend_file%3dphp://input">http://192.168.0.125/dvwa/?d+allow_url_include%3d1+d+auto_prepend_file%3dphp://input</a>

		<a href="http://192.168.0.125/dvwa/login.php?d+allow_url_include%3d1+d+auto_prepend_file%3dphp://input">http://192.168.0.125/dvwa/login.php?d+allow_url_include%3d1+d+auto_prepend_file%3dphp://input</a>
Source Code Disclosure - CVE2012-1823	High	<a href="http://192.168.0.125/dvwa/?-s">http://192.168.0.125/dvwa/?-s</a>
		<a href="http://192.168.0.125/dvwa/login.php?-s">http://192.168.0.125/dvwa/login.php?-s</a>
Content Security Policy (CSP) Header Not Set	Medium	<a href="http://192.168.0.125/dvwa">http://192.168.0.125/dvwa</a>
		<a href="http://192.168.0.125/dvwa/login.php">http://192.168.0.125/dvwa/login.php</a>

## 2 – Post-Exploitation Evidence collection

Alert generated on the web

## 3 – Technical summary

A penetration test was performed on DVWA and Kioptrix using Kali Linux. Enumeration revealed RCE (CVE-2012-1823), XSS, CSP misconfiguration, directory browsing, and insecure cookies. Exploitation achieved remote command execution and shell access. Post-exploitation confirmed system exposure due to outdated services and missing security headers. Evidence and attack logs were collected .

## 4 – Non technical summary

A security assessment was conducted on the DVWA and Kioptrix environments to identify weaknesses that attackers could exploit. Several high-risk issues were found, including a remote code execution flaw and misconfigured security controls. These vulnerabilities allowed unauthorized system access and exposure of sensitive information. Additional medium-risk issues, such as missing security headers, directory browsing, and insecure cookies, increased the overall attack surface. After exploiting the system, we demonstrated how an attacker could gain control and extract data. To reduce risk, the system should be updated, patching applied, and secure configurations implemented. Overall security can improve significantly with regular maintenance and reviews.
